ABSTRACTED-PUB-NO: US 6449645B
BASIC-ABSTRACT:

NOVELTY - Digitized information packets and computers (12) are provided with respective unique identification indicia. The indicia are transmitted from the computers to servers (16) connected to the Internet (18) such that the packets are associated with corresponding computers. The association of the indicia of one of the packets with more than one computer, is determined to indicate the possibility of the packets being copied.

DETAILED DESCRIPTION - INDEPENDENT CLAIMS are included for the following:

- (1) Detection system; and
- (2) Method for detecting illegal use of several identical packets of digitized information.

USE - For detecting pirating of digitized information such as movie, music, multimedia. For compiling copyright/patent/license infringement and violation through Internet, intranet, LAN, etc.

ADVANTAGE - Improves security by preventing illegal use and copying of digitized information, by determining the association of identification indicia of digitized information packet with more than one computer, such that evidence of such illegal use is effectively obtained.

DESCRIPTION OF DRAWING(S) - The figure shows a schematic view of the digitized information pirating detection system.

Computer 12

Server 16

Internet 18
